Company Overview

Roadphone NRB (National Radio Bank) are recognised internationally for providing consistently high-quality solutions in the design, supply, installation and maintenance of radio systems and equipment hire.

Our operations and services have an environmental impact, so we have looked to mitigate this by implementing a UKAS certified ISO14001:2015 management system.

Goals & Objectives

We aim to:

- Adhere to and work beyond both current and anticipated environmental legislation and other requirements
- Ensure compliance with the Environmental Protection Act 1999, by meeting the requirement to ensure those employed by the company control their activities and mitigate impact to the environment.
- Implement a waste management strategy that minimises waste production and therefore increases diversion from landfill through:
 - 1. Recycling
 - 2. Supply Chain Management
 - 3. Ensure our activities will operate in such a way so as to prevent pollution.
- Implement an energy strategy that:
 - 1. Improves energy efficiency
 - 2. Sources from green providers where possible
- Monitor and quantifiably reduce our carbon footprint
- Build an environmentally responsible supply chain and subcontractor network
- Educate, train and motivate employees to carry out tasks in an environmentally responsible manner
- Implement the provisions included in the Montreal Protocol, thereby protecting and improving the living environment to fulfil its duty of care to present and future populations
- Embed and continuously improve our environmental performance both internally and with our supply chain and subcontractor network.

Delivery

To implement these objectives an Environment, Health and Safety team has been established to periodically co-ordinate, manage and review the ongoing development and implementation of the EMS. This is fully supported by the company's Senior Management, who are committed to improving the environmental performance of the business.
